Day 9

Salesforce Placement Management System

Student Application Flow, Application Tracking & Admin Application Management

Project	Placement Management System
Platform	Salesforce (Lightning Web Components + Apex)
Sprint Day	Day 9
Student	Sudharshan Kuppili
Program PIN	24PA5A0517
Status	Day 9 — 100% Complete

This document records the Salesforce development work completed on Day 9 of the Placement Management System project: the student-facing Eligible Jobs and My Applications Lightning Web Components, the job application workflow, and the Admin Application Management screen used to update application status, interview dates and remarks. All content is based on the Day 9 task log and the accompanying screenshots captured from the Salesforce org and the local development environment.

1. Day 9 Overview

Day 9 of the Placement Management System project focused on giving the backend architecture built in earlier sprints a working, student-facing interface. The objective was to let a student open the Placement Portal, view the jobs they are eligible for, apply for a job, and track the status of their applications — while an administrator uses a separate screen to review applications and update their status, interview date, and remarks.

The work covered the **Placement Home FlexiPage**, the **Eligible Jobs** Lightning Web Component, the job application flow, duplicate-application handling, the **My Applications** component (including a UI improvement pass), the **Admin Application Management** screen, and status-update testing across the Applied, Shortlisted, Selected and Rejected states. The Day 9 task log confirms all planned tasks were completed and tested, with validation performed through both the Salesforce UI and SOQL queries.

Scope of This Document

- Placement Home / FlexiPage deployment and verification
- Eligible Jobs LWC and its Apex controller
- Student job application flow, including eligibility and duplicate-application checks
- My Applications LWC and its UI improvement
- Admin Application Management screen for status, interview date, and remarks
- Status testing for Applied, Shortlisted, Selected, and Rejected records
- SOQL-based verification of Placement_Application__c records

2. Learning Objectives

The completed Day 9 work demonstrates the following practical Salesforce development objectives:

- Build and deploy Lightning Web Components (LWC) that surface Apex-driven business data.
- Connect an LWC to an Apex controller using an **@AuraEnabled** method to retrieve records.
- Design a FlexiPage that composes multiple components into a single student-facing page.
- Implement a user-initiated action (Apply) that creates a record via Apex from the UI.
- Prevent duplicate submissions and surface both success and validation-error feedback to the user.
- Build an administrator-facing screen that updates a record's status, date, and text fields.
- Verify Salesforce data changes using the Salesforce CLI (**sf data query**) and SOQL.
- Deploy metadata (FlexiPages, LWCs, Apex classes) with the Salesforce CLI and confirm deployment status.

3. Placement Home / FlexiPage

The **Placement_Home** FlexiPage is the single landing page students use to access the placement portal. It was retrieved from the org, verified, and redeployed during Day 9. The page composes several components:

a welcome/summary panel (placementHome), the eligible jobs list (eligibleJobs), the student's own applications (myApplications), and the administrator's application management view (adminApplications).

The page was configured and activated through the Lightning App Builder, and the deployment was confirmed successful using the Salesforce CLI.

Figure 1: Placement Home page composed in Lightning App Builder, showing the welcome panel and the Eligible Jobs component.

Activation: Placement Home

PAGE SETTINGS

LIGHTNING EXPERIENCE

MOBILE NAVIGATION

Give this app page a name, set the page visibility, and choose an icon.

Name

Enter a name for your page.

Icon

Choose an icon to represent your app in Lightning Experience and the mobile app.

[Change...](#)

Page Activation

A custom tab was created for this page when it was first activated. Adjust the tab's visibility to users by using [Profiles](#) and [Permission Sets](#) and by adding page to navigation menus.

Figure 2: Activation dialog for the Placement Home page, confirming the page name and icon before publishing.

```
PS C:\Users\Sudharshan\Downloads\Sales Force--work\placementManagement> sf project deploy start --source-dir force-app\main\default\flexipages\Placement_Home.flexipage-meta.xml --target-org PlacementOrg
» Warning: @salesforce/cli update available from 2.145.6 to 2.148.3.

Deploying Metadata

Deploying v67.0 metadata to sudharshan5@vishnu.edu.in using the v67.0 SOAP API.

Figure 3: Salesforce CLI deployment of the Placement_Home FlexiPage, showing a successful deploy status.

Figure 4: Placement Home page rendered for a student, showing the welcome panel with student details and application summary.

4. Eligible Jobs

The **eligibleJobs** Lightning Web Component displays the list of jobs a student can apply for. Each job card shows the Job Name, Company, Minimum CGPA, Eligible Branch, and Application Deadline, along with an Apply button. Data is retrieved through the **EligibleJobsController** Apex class, which exposes an **@AuraEnabled(cacheable=true)** method that queries the **Job__c** object for jobs whose Application Deadline has not yet passed, ordered by deadline.

The component was scaffolded using the Salesforce CLI (**sf lightning generate component**), implemented, and deployed. Both the LWC bundle and the **EligibleJobsController** Apex class were deployed successfully to the target org.

Figure 5: Generating the `eligibleJobs` LWC bundle using the Salesforce CLI inside the Antigravity IDE.

Figure 6: `EligibleJobsController` Apex class querying `Job__c` records for the `Eligible Jobs` component, with a successful deployment shown in the terminal.

```
PS C:\Users\Sudharshan\Downloads\Sales Force-work\PlacementManagement> sf project deploy start --source-dir force-app\main\default\lwc\eligibleJobs --target-org PlacementOrg
» Warning: @salesforce/cli update available from 2.145.6 to 2.148.3.

Deploying Metadata

Deploying v67.0 metadata to sudharshan5@vishnu.edu.in using the v67.0 SOAP API.

Created	eligibleJobs	LightningComponentBundle	force-app\main\default\lwc\eligibleJobs\eligibleJobs.js
Created	eligibleJobs	LightningComponentBundle	force-app\main\default\lwc\eligibleJobs\eligibleJobs.js-meta.xml

Figure 7: Salesforce CLI deployment of the eligibleJobs LWC bundle (HTML, JS, and metadata), confirmed as succeeded.

Figure 8: Eligible Jobs component rendered in the org, listing jobs with Company, Minimum CGPA, Eligible Branch, Application Deadline and an Apply button.

5. Job Application Flow

The student job application flow was tested end-to-end. A student viewing the Eligible Jobs list selects a job and clicks **Apply**. The component invokes Apex to create a corresponding **Placement_Application__c** record, and the student is shown a success message confirming the submission.

During testing, the Apply action was also confirmed to enforce eligibility: attempting to apply for a job that requires a higher CGPA than the student's record returns a validation error rather than creating an application.

Figure 9: “Application submitted successfully” confirmation toast after applying for the AI Engineer – Test job.

Figure 10: Eligibility validation error (“You are not eligible. Required CGPA: 9.00”) returned when the Apply action is attempted for a job the student does not meet the CGPA requirement for.

Figure 11: “Application submitted successfully” confirmation toast after applying for the Data Analyst – Apply Test job.

Figure 12: SOQL query against Placement_Application__c confirming application records, including Student__c, Job__c, Application_Date__c and Status__c.

6. Duplicate Application Validation

The Day 9 task log records that duplicate-application handling was tested: attempting to apply again for a job the student had already applied to was confirmed to be blocked, with the toast message **“You have already applied”** shown to the student. The Day 9 documentation confirms this prevented a duplicate Placement_Application__c record from being created for the same student and job.

7. My Applications

The **myApplications** Lightning Web Component loads and displays the applications belonging to the currently logged-in student, backed by the **MyApplicationsController** Apex class. Each application entry shows the Job Name, Company, Applied On date, current Status, and the Interview Date when one has been set.

Figure 13: My Applications component listing a student's submitted applications with Company, Applied On date, Status, and Interview Date.

Figure 14: My Applications card for the Software Engineer – Eligible Test application, showing a Shortlisted status with an Interview Date.

8. My Applications UI Improvement

The My Applications interface was enhanced beyond the initial plain list. The improved version adds a page subtitle (“Track your placement applications and interview status”), clearer application cards, colour-coded

status badges, and a visual application-status progression indicator (Applied → Shortlisted → Selected/Rejected) beneath each application. Applied Date, Interview Date, Application Status, Job, and Company details are presented more clearly than in the original layout.

Figure 15: Improved My Applications interface showing the page subtitle, status badges, and an application status progression indicator for each application.

9. Admin Application Management

The **adminApplications** Lightning Web Component, backed by the **AdminApplicationsController** Apex class, allows an administrator to view and manage student applications. Each record displays the Student, Job title, Company, Applied On date, and Current Status, along with editable fields for Status, Interview Date, and Remarks, and an Update Application action.

10. Application Status Update

Updating an application's status from the Application Management screen was tested and confirmed working. Submitting the Update Application action produces the success toast “**Application updated successfully.**” and the new status is reflected immediately in the record's Current Status field.

Figure 18: Application Management screen for the Data Analyst – Apply Test application after a successful status update to Shortlisted, with Interview Date set to 28-Aug-2026.

11. Interview Date

Setting an Interview Date from Application Management was tested. The date entered by the administrator is saved to the application record and is displayed back to the student in the My Applications component.

Status:Selected
Interview Date:2026-08-29

Figure 20: My Applications card for the Data Analyst – Apply Test application showing the saved Interview Date of 2026-08-29.

12. Remarks

Adding remarks to an application was tested from the Admin Application Management screen. Remarks entered by the administrator were saved successfully, and the updated record was verified using a Salesforce SOQL query.

Examples of remarks entered during testing include “*Technical Interview Scheduled*” (Shortlisted status), “*Selected after technical interview*” (Selected status), and “*low cgpa*” (Rejected status).

The screenshot shows the Salesforce Developer Edition interface. At the top, there is a navigation bar with a hamburger menu, a 'Developer Edition' badge, a search bar, and navigation links for 'Service', 'Home', 'Chatter', 'Accounts', and 'Contacts'. A success message 'Success: Application updated successfully.' is displayed in a green box. Below the navigation bar, there is a form for managing applications. The form includes a date field set to '13-Aug-2026', a 'Remarks' field, and an 'Update Application' button. Below this, there is a section for 'Software Engineer' with fields for 'Student: Sudharshan Kuppili', 'Company: TCS', 'Applied On: 2026-08-08', and 'Current Status: Rejected'. The 'Status' field is set to 'Rejected', and the 'Interview Date' field is empty. The 'Remarks' field contains the text 'low cgpa'. There is another 'Update Application' button at the bottom of the form.

Figure 21: Application Management for the Software Engineer application at TCS, showing Status set to Rejected with the remark “low cgpa”, and the “Application updated successfully” confirmation.

13. Application Status Testing

Each application status supported by the workflow was individually tested and verified in both the Admin Application Management screen and the student-facing My Applications component.

Applied

A newly submitted application defaults to the Applied status, as shown immediately after a successful job application.

Figure 22: My Applications list showing the Data Analyst – Apply Test application with a Status of Applied immediately after submission.

Shortlisted

An application updated to Shortlisted status was verified to display the Shortlisted badge and status progression, along with an Interview Date when one is available.

Figure 23: My Applications card for the Data Analyst – Apply Test application showing a Shortlisted status and Interview Date of 2026-08-28.

Selected

An application updated to Selected status was verified in the Application Management screen and reflected correctly in My Applications, including the associated Interview Date.

Figure 24: My Applications card for the Data Analyst – Apply Test application showing a Selected status with Interview Date 2026-08-29.

Rejected

An application updated to Rejected status was confirmed to display correctly in My Applications, with the status UI correctly handling the rejected state (no interview date shown).

Figure 25: My Applications card for the Software Engineer application at TCS showing a Rejected status.

14. Application Data Verification

Application records were verified directly in Salesforce using SOQL queries run through the Salesforce CLI (**sf data query**). Queries against **Placement_Application__c** confirmed the Id, Student__c, Job__c, Application_Date__c and Status__c fields for recently created and updated application records, matching the changes made through the UI.

```
PS C:\Users\Sudharshan\Downloads\Sales Force--work\placementManagement> sf data query --query "SELECT Id, Student__c, Job__c, Application_Date__c, Status__c FROM Placement_Application__c ORDER BY CreatedDate DESC LIMIT 10" --target-org PlacementOrg
> Warning: @salesforce/cli update available from 2.145.6 to 2.148.3.
```

ID	STUDENT__C	JOB__C	APPLICATION_DATE__C	STATUS__C
a0ANS00000CuHqT2AV	a08NS00001UpMRcYAN	a09NS00000ZTwm9YAD	2026-08-22	Applied
a0ANS00000CtF2j2AF	a08NS00001UpMRcYAN	a09NS00000ZGY09YAP	2026-08-21	Shortlisted

Total number of records retrieved: 7.
Querying Data... done

Figure 26: SOQL query results for Placement_Application__c showing Student__c, Job__c, Application_Date__c and Status__c for the most recent application records.

15. End-to-End Application Flow

The complete Day 9 workflow was verified end-to-end, from a student viewing an eligible job through to the updated status appearing back in My Applications:

16. Hands-On Implementation Summary

The following Salesforce components were built, deployed, and verified as part of the Day 9 work:

Component	Type / Role
Placement_Home	FlexiPage — student portal landing page
eligibleJobs	LWC — displays eligible jobs and handles Apply
myApplications	LWC — displays the student's own applications
adminApplications	LWC — administrator application management screen

EligibleJobsController	Apex controller — retrieves eligible Job__c records
MyApplicationsController	Apex controller — retrieves the student's applications
AdminApplicationsController	Apex controller — updates application status and details
Placement_Application__c	Custom object — stores each student's job application

17. Testing and Validation Summary

Area	What Was Tested	Result
Placement Home	FlexiPage retrieval and deployment	Deployed successfully
Eligible Jobs	LWC and controller deployment; job list display	Deployed and verified
Apply flow	Student applies for an eligible job	Application submitted successfully
Eligibility check	Apply attempt below required CGPA	Blocked with validation error
Duplicate application	Re-applying to an already-applied job	Blocked; "You have already applied"
My Applications	Display of job, company, status, dates	Verified for logged-in student
UI improvement	Status badges and progression indicator	Verified visually
Admin management	Viewing and updating student applications	Verified successfully
Status update	Changing application status	"Application updated successfully."
Interview Date	Setting and displaying interview date	Saved and displayed correctly
Remarks	Adding remarks to an application	Saved and verified via SOQL
Selected status	Status badge and progression for Selected	Displayed correctly
Shortlisted status	Status badge and progression for Shortlisted	Displayed correctly
Rejected status	Status display for Rejected	Displayed correctly
Data verification	SOQL query on Placement_Application__c	Records verified

18. Key Learnings

- Building and wiring Lightning Web Components to Apex controllers to display Salesforce data.
- Using @AuraEnabled Apex methods as the bridge between the UI and business logic.
- Implementing a complete student-facing workflow: view → apply → track status.
- Designing and improving a component UI with status badges and a progression indicator.

- Building an administrator screen to update record status, dates, and text fields.
- Validating functionality directly against Salesforce data using SOQL and the Salesforce CLI.
- Deploying FlexiPages, LWC bundles, and Apex classes with the Salesforce CLI and confirming successful deployment.

19. Final Day 9 Status

DAY 9: 100% COMPLETE

All planned Day 9 tasks were completed and tested. Validation was performed through both the Salesforce UI and SOQL queries, confirming that the student application workflow and the admin application management workflow function correctly end-to-end.

20. Conclusion

Day 9 turned the Placement Management System's backend architecture into a usable student and administrator experience. Students can now view eligible jobs, submit applications, and track their status and interview details through the My Applications component, while administrators can review and update applications through a dedicated management screen. The application flow was verified end-to-end, and duplicate submissions, eligibility checks, and status transitions (Applied, Shortlisted, Selected, Rejected) were each tested and confirmed. This sprint demonstrates practical, working knowledge of Lightning Web Component development, Apex controller integration, FlexiPage composition, and Salesforce data verification through SOQL.
