

Day 12 – Student Portal Security & Final Validation

Field	Detail
Student Name	Sudharshan Kuppili
PIN No.	24PA5A0517
Project Name	PlacementManagement
Platform	Salesforce (Developer Edition)
Source API Version	67.0
Target Org Alias	PlacementOrg
Documentation Scope	Security validation, deployment verification, Apex test verification, and Student Portal UI validation

Day 12 Objective

- Student Portal security validation
- Permission Set verification
- Apex class access verification
- Permission Set assignment verification
- Deployment verification
- Apex test verification
- Student data verification
- Placement application data verification
- Student Portal UI validation
- Final evidence collection

1. Project Configuration Overview

Day 12 marks the final validation phase of the Placement Management System. Rather than introducing new features, this day focused on confirming that everything built across prior days — components, Apex classes, security configuration, and data — is correctly deployed, secured, and functioning as expected in the target org.

Lightning Web Components

Component
adminApplications
adminDashboard
adminJobs
eligibleJobs
myApplications
placementHome
studentDashboard
studentHome
studentProfile

Apex Classes

Apex Class
AdminApplicationsController
AdminDashboardController
AdminJobsController
ApplicationService
EligibleJobsController
MyApplicationsController
PlacementFutureService
PlacementHomeController
PlacementQueueableService
PlacementScheduledService
PlacementStudentBatch
StudentDashboardController
StudentProfileController

Custom Objects

Custom Object

Job__c
Placement_Application__c
Student__c

Permission Set

Name	Label
Student_Portal	Student Portal Access

2. Deployment Validation

What was done: The most recent metadata deployment to the PlacementOrg target org was verified using the Salesforce CLI deploy report command.

Why it was done: Before final sign-off, it is essential to confirm that every component built during the project — LWCs, Apex classes, validation rules, permission sets, and metadata — was deployed to the org without errors, and that no test failures occurred during deployment.

How it was validated:

```
sf project deploy report --use-most-recent --target-org PlacementOrg
```

Metric	Value
Deployment ID	0AfNS00000kJRzt0AO
Status	Succeeded
Components Deployed	52 / 52
Component Errors	0
Test Errors	0
Created By	Kuppili Sudharshan

Result: The deployment completed successfully with all 52 components deployed and zero component or test errors.

```
PS C:\Users\Sudharshan\Downloads\Sales Force-work\placementManagement> sf project deploy report --use-most-recent --target-org PlacementOrg
> Warning: @salesforce/cli update available from 2.145.6 to 2.148.3.
0AfNS00000kJRzt0AO... Succeeded

Figure 1: Deployment report confirming Succeeded status with 52/52 components deployed and 0 errors.

3. Apex Test Validation

What was done: Local Apex tests were executed against the PlacementOrg target org to confirm that existing test coverage still passes after the final deployment.

Why it was done: Running local tests as part of final validation confirms that the deployed Apex logic behaves as expected and that no regressions were introduced.

How it was validated:

```
sf apex run test --target-org PlacementOrg --test-level RunLocalTests --wait 10
```

Metric	Value
Test Name	AppointmentTriggerHandlerTest.testDuplicateAppointment
Outcome	Passed
Tests Ran	1
Pass Rate	100%
Fail Rate	0%
Skip Rate	0%

Result: The executed test passed with a 100% pass rate and zero failures or skips.

Unchanged	Student__c.All	ListView	on__c\listViews\All.listView-meta.xml
Unchanged	Student_Portal	PermissionSet	force-app\main\default\objects\Student__c\listViews\All.listView-meta.xml

Username sudharshan5@vishnu.edu.in
```

Figure 2: Apex test execution output confirming a Passed outcome with 100% pass rate.

4. Student Data Validation

What was done: The Student__c record linked to the current Salesforce user was queried and verified.

Why it was done: Confirming the student record and its association with the logged-in user ensures that portal components relying on user context (such as eligibility checks) reference accurate data.

Field	Value
Student Name	Sudharshan Kuppili
PIN No.	24PA5A0517
Branch	CSE
CGPA	8.75

Result: The Student__c record was confirmed to be associated with the current Salesforce user and reflects accurate profile data.

5. Placement Application Data Validation

What was done: Placement application records associated with the student were queried and verified for count and status accuracy.

Why it was done: This confirms that application data flowing through the system — applied, shortlisted, selected, and rejected statuses — is being tracked correctly and is ready for display in the Student Portal.

Field	Value
Total Placement Applications	7
Statuses Present	Applied, Shortlisted, Selected, Rejected
Interview Dates	Present for applicable applications

Result: A total of 7 placement applications were verified, spanning all four status values used by the system.

6. Student Portal Security Validation

What was done: A consolidated security validation script was executed against PlacementOrg to confirm the Student_Portal Permission Set, its Apex class access, and its assignment to the student user — all in a single verification pass.

Why it was done: Security validation ensures that student users can only access the Apex controllers intended for the Student Portal, and that the correct permission set is actually assigned to the student's user record — closing the loop between configuration and enforcement.

6.1 Permission Set Verification

```
sf data query --query "SELECT Id, Name, Label FROM PermissionSet WHERE Name = 'Student_Portal'" --target-org PlacementOrg
```

Id	Name	Label
OPSNS00000XQ8zr4AD	Student_Portal	Student Portal Access

6.2 Apex Class Access Verification

```
sf data query --query "SELECT Id, SetupEntityId, SetupEntityType FROM SetupEntityAccess WHERE ParentId = '0PSNS00000XQ8zr4AD' AND SetupEntityType = 'ApexClass'" --target-org PlacementOrg
```

Apex Class Granted Access
EligibleJobsController
MyApplicationsController
StudentProfileController

6.3 User Assignment Verification

```
sf data query --query "SELECT Id, Assignee.Name, PermissionSet.Name FROM PermissionSetAssignment WHERE AssigneeId = '005NS000013DZKHYA4' AND PermissionSet.Name = 'Student_Portal'" --target-org PlacementOrg
```

Assignee	Permission Set
Kuppili Sudharshan	Student_Portal

Result: All three checks passed. The Student_Portal Permission Set exists, is correctly scoped to the three student-facing Apex controllers (EligibleJobsController, MyApplicationsController, StudentProfileController), and is assigned to the student user Kuppili Sudharshan.

```

===== END SECURITY VALIDATION =====

```

Figure 3: Consolidated Student Portal security validation — Permission Set, Apex class access, and user assignment confirmed in a single script run.

7. Student Portal UI Validation

What was done: The major Student Portal sections were opened and visually verified in the PlacementOrg org to confirm they render correctly for the assigned student user, using the Student_Portal Permission Set validated above.

Why it was done: Confirming the UI end-to-end ensures that the security configuration and underlying Apex controllers translate into a working experience for the student, not just passing backend queries.

7.1 Student Dashboard & Eligible Jobs

The Placement Home entry point displays the Placement Dashboard with live application statistics (Total Applications, Applied, Shortlisted, Selected) and the Eligible Jobs section listing open job postings with eligibility criteria.

Figure 4: Student Dashboard showing application statistics alongside the Eligible Jobs section for the logged-in student.

7.2 My Applications

The My Applications component displays each application the student has submitted, including applied date, interview date, and a visual status tracker (Applied → Shortlisted → Selected/Rejected), backed by MyApplicationsController.

Figure 5: My Applications view showing the Data Analyst - Apply Test application with a Selected status and interview details.

7.3 Student Profile

The Student Profile component, backed by StudentProfileController, displays the student's core profile fields — Name, CGPA, and Branch — matching the Student__c record verified in Section 4.

Figure 6: Student Profile section showing Student Name, CGPA, and Branch fields consistent with the verified Student__c record.

Result: All validated Student Portal sections — Dashboard, Eligible Jobs, My Applications, and Student Profile — rendered correctly and matched the data verified at the backend level.

8. Day 12 Summary

Day 12 served as the final validation checkpoint for the Placement Management System. The focus shifted from feature development to verifying that everything built across prior days is correctly deployed, secured, and functioning end-to-end for the student user.

Validation Checklist

- ✓ Successful 52/52 component deployment (0 errors)
- ✓ 100% Apex test pass result
- ✓ Student record validation (Sudharshan Kuppili, CSE, CGPA 8.75)
- ✓ 7 placement applications verified across Applied/Shortlisted/Selected/Rejected statuses
- ✓ Student_Portal Permission Set confirmed in org
- ✓ EligibleJobsController access confirmed
- ✓ MyApplicationsController access confirmed
- ✓ StudentProfileController access confirmed
- ✓ Student Portal user assignment confirmed (Kuppili Sudharshan)
- ✓ Student Dashboard UI validated
- ✓ Eligible Jobs UI validated
- ✓ My Applications UI validated
- ✓ Student Profile UI validated
- ✓ Full screenshot evidence collected

This documentation, together with the evidence captured, confirms that the Student Portal of the Placement Management System is correctly deployed, properly secured at the Permission Set and Apex class level, and fully functional for end users.
